

PROFESSIONAL LINE

Purificazione totale con AIRDOG IEF

igeamed.

Siamo l'aria che respiriamo

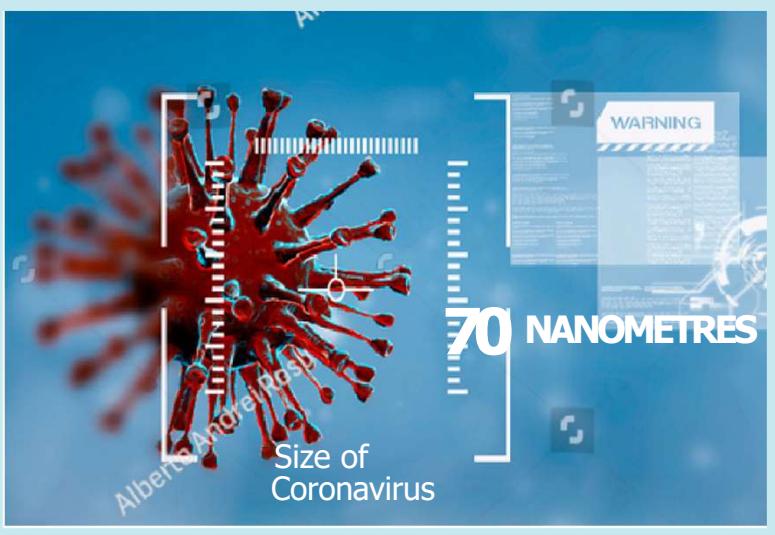

Obiettivi principali

Garantire una **purificazione profonda** dell'aria sia a livello particellare che microbiologico, **promuovendo il benessere delle persone**

Minimizzare il consumo energetico

Ridurre il carbon footprint e promuovere la sostenibilità ambientale

Offrire una soluzione **economicamente vantaggiosa**

Capacità filtrante fino a

0.01µm

Al cuore dell'innovazione

Tecnologia del filtro Airdog IEF

Fa leva su una tecnologia innovativa di **precipitazione elettrostatica ad alta efficienza** per catturare particelle submicroniche e ultrafini, trattenute per coesione molecolare su piastre metalliche lavabili

Un cambio di paradigma

Vantaggi rispetto ai filtri tradizionali

Lavabile e Riutilizzabile: Elimina la necessità di sostituzioni frequenti e riduce i rifiuti

Bassa Perdita di Carico: Minimizza le perdite di carico tipiche dei filtri convenzionali, riducendo significativamente il consumo energetico

Salubre: Elimina efficacemente microrganismi e allergeni aerotrasportati

EXPECTED LIFESPAN
>10 years

Una soluzione Smart

Vantaggi generali

- **Eco-Friendly:** Alternativa sostenibile ed efficiente dal punto di vista energetico e di impatto ambientale
- **Efficace:** Gamma di filtrazione più ampia rispetto ai filtri tradizionali
- **Economica:** Riduzione dei costi operativi
- **Facile da Installare:** Può essere integrato nei sistemi HVAC esistenti senza modifiche strutturali
- **Manutenzione Efficiente:** Il telaio principale e l'elettronica rimangono in sede, mentre gli elementi lavabili sono facilmente separabili, semplificando la manutenzione e riducendo i tempi di inattività
- **Conveniente:** Disponibile con formule di noleggio operativo, con riscatto a costi di rimborso rateale dimostrabilmente inferiori ai risparmi operativi ottenuti e possibilità di includerlo in iniziative fiscalmente vantaggiose come Industry 5.0.
- **Aggiornato:** Contribuisce significativamente al raggiungimento degli obiettivi di efficientamento energetico previsti dalla Direttiva UE 2023/1791.

AIRDOG IEF INDUSTRIAL

Technical datasheet

Model	IEF 1700	IEF 3400
Product description	Unità elettrostatica singola	Unità elettrostatica doppia
Type of product	Advanced Electrostatic filtration Unit	
Dimension (lwidth*height*depth)	305*610*150	610*610*150
Applicable air volume	1700	3400
Rating voltage	110~240 V / 50~60 Hz	
Power consumption	< 10 W	<20 W
Weight	12,3 kgs	21,5 kgs
Package size	710*400*250 mm	710*710*250 mm
Signals	Running and Short circuit / fault alarm	
Environmental conditions	-10~40°C 0-95%Rh

Trattamento Total Quality

Sistema integrato per esigenze assolute

Per una purificazione dell'aria di standard farmaceutico/ospedaliero, il trattamento dell'aria interna può essere integrato con unità periferiche standalone.

Il sistema centralizzato purifica l'aria in entrata dall'esterno, mentre i sistemi standaloner imuovono efficacemente particelle a livello ultrafine (sotto i 100 nanometri), composti organici volatili, polline, muffe, batteri, virus e altri inquinanti generati dalla presenza e dalle attività umane negli spazi interni, garantendo una qualità dell'aria senza pari.

QUANDO SERVE DI PIÙ

Airdog X8

Alte prestazioni, ideale per ampi spazi come ospedali, industrie alimentari, magazzini e aree di preparazione, laboratori, centri commerciali e uffici.

Il modello X8 offre prestazioni senza pari, certificate da enti come la FDA degli Stati Uniti, il Servizio Sanitario Nazionale del Regno Unito, i laboratori Hygcen in Germania, SGS e l'Università di Bologna.

Agisce sia sull'aria fresca prelevata dall'esterno sia sull'aria ricircolata e inquinata all'interno. Il sistema è disponibile in una gamma di unità adattabili a diversi contesti spaziali, supportato da un sistema intelligente di controllo e monitoraggio.

Applicabile come integrazione ai sistemi centralizzati e in luoghi in cui l'installazione di HVAC non è possibile.

Test Result(s)

PART NAME No.1 : AIR PURIFIER

Test Item and Method : Performance Test

Experiment test :

- The product was set up in a 2.9m×1.4m×1.9m of test chamber as the client requested.
- Analyzing the Total Bacteria Counts in air before and after processing **an hour later**.

Control test :

- The test procedure was as same as experiment without putting the product.
- In order to understand the performance of product in suppression effect of Total Bacteria Counts.

Test Result :

Test Item	Unit	Control test	Experiment test	Elimination ratio(%)
Total Bacteria Counts	CFU/m³	4111	<6	>99.9

Test Item and Method : Performance Test

Experiment test :

- The product was set up in a 2.9m×1.4m×1.9m of test chamber as the client requested.
- The Particulates were injected in the 2.9m×1.4m×1.9m chamber and made sure the PM_{2.5} concentration be mixed and stabilized by the detector.

Control test :

- The test procedure was as same as experiment without putting the product, in order to understand the performance of the product in suppression effect of PM_{2.5}.

Test Result :

Test Item	Unit	Control test	Experiment test	Elimination ratio(%)
Fine Suspended Particulates(PM _{2.5})	µg/m³	1140	<1	>99.9

Test Item and Method : Performance Test

Experiment test :

- The product was set up in a 2.9m×1.4m×1.9m of test chamber.
- The test odor gas (individually by Formaldehyde odor) was injected in the 2.9m×1.4m×1.9m test chamber.
- Monitor the odor concentration by gas detector while the concentration were mixed and stabilized.
- To analyze the Formaldehyde in air before turning on the product and after processing **an hour later**.

Control test :

- The test procedure was as same as experiment without turning on the product, in order to understand the performance of the product in suppression effect of Formaldehyde.

Test Result :

Test Item	Unit	Control test	Experiment test	Elimination ratio(%)
Formaldehyde	ppm	0.789	<0.001	>99.9

Re: K211507

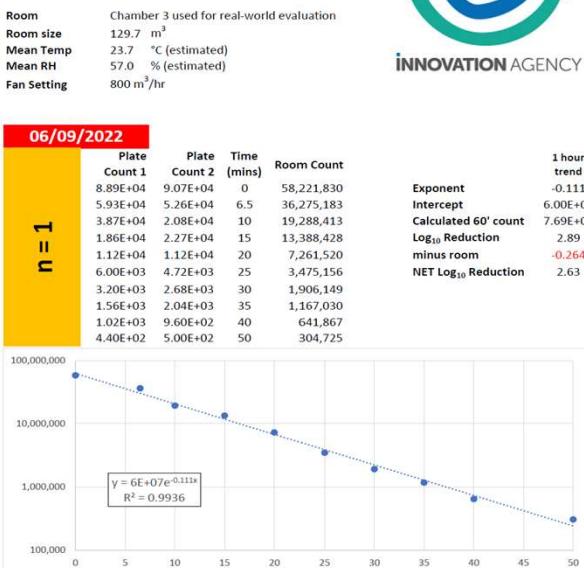

Trade/Device Name: Airdog X5 Recirculating Air Cleaner (model KJ300F-X5)
Regulation Number: 21 CFR 880.5045
Regulation Name: Medical recirculating air cleaner
Regulatory Class: Class II
Product Code: FRF
Dated: October 21, 2022
Received: October 21, 2022

Dear Tyra Chiu:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. Although this letter refers to your product as a device, please be aware that some cleared products may instead be combination products. The 510(k) Premarket Notification Database located at <https://www.accessdata.fda.gov/scripts/cder/pnmp/pnmp.cfm> identifies combination product submissions. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the [Federal Register](#).

Please be advised that FDA's issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. AIRDOG IEF INDUSTRIAL

CERTIFICATO DI ANALISI

Data del Certificato: 29/01/2021
Tipo Test: Test Sanificazione Aria

Strumento testato: TPA by Airdog X5
Modello: KJ300F-X5, numero di serie BAKIT39A011028
Costruttore: Anhui Beilang Air Tech Ltd.

Durata Test	Virus utilizzato	Concentrazione del virus aerosolizzato (TCID50/M3) misurato a macchina spenta	Concentrazione del virus aerosolizzato (TCID50/M3) misurato a macchina accesa	riduzione in % del titolo
30 secondi	SARS-CoV2 B1 lineage	5.00x 10 ⁶	4.90x 10 ⁴ ± 2.5 x 10 ⁴	99.02

Metodologia

Virus aerosolizzato utilizzando un nebulizzatore in una camera da 0.17 m³
Misurazione per 5 minuti di cellule E6 Vero in una camera da 0.17 m³ in modalità accesa e spenta (triplicato)
Incubazione per 36 ore (37°C, 5% CO₂) e quantificazione RT-PCR in tempo reale (SARS-CoV2 N, E)

Professore Assistente di Biologia Medica - Virologia Molecolare
Dipartimento di Medicina, Università Democritus della Tracia

Effectiveness of a room air disinfection process Airdog X8 in terms of a germ reduction of aerosolized germs in the room air

EXPERT OPINION

Summary and evaluation

After 120 minutes, no more bacteriophages Coliphage phi X174 could be detected in the room air. The highest reduction rate for the tested device Airdog X8 has been determined under the tested conditions (humidity at the start of the introduction of the aerosol 63% rel. humidity, 20°C, 75m³ room volume, setting of the device to an air turnover rate of 1000m³/h) after one hour with >3.39lg stages.

The present results, with respect to coliphage phi X174, also suggest an efficacy of the procedure against other viruses (at least enveloped viruses, including coronaviruses). Thus, when the method is used, effective germ reduction can be achieved directly in the air.

SECTION 1

SUMMARY

The representative sample(s) have been tested, investigated, and found to comply with the requirements of standards:

Electrostatic Air Cleaners, UL 867, Section 40, Fifth Edition, August 4, 2011 revision: AUGUST 7, 2018.

Electrostatic Air Cleaners, ICSA C22.2#187-2020 Ed.5], Section 7.4

The equipment identified in this report has been found to meet the criteria for emittance of ozone not exceeding a concentration of 0.050 ppm. Furthermore, a second sample was not required to be tested, according to UL 867, as the first sample's maximum emissions were less than 0.030 ppm, which satisfies item a) in the Section 40.1.1.

This report completes our evaluation covered by Intertek Project Number 201029108GZU which has been authorized by Intertek quote number: QG2201013032 & QG2210408107. If there are any questions regarding the results contained in this report, or any of the other services offered by Intertek, please do not hesitate to contact the above signed.

OZONE EMISSIONS SUMMARY			
FAN SPEED	FILTER(S)	03/VOLTAGE SETTING	C(t) _{max} [ppm]
800 (Highest)	Pre-filter, ESP filter and carbon filter	-	0.004
Sleep (Lowest)	Pre-filter, ESP filter and carbon filter	-	0.007
Sleep (Lowest)	Pre-filter and carbon filter	-	0.001
Sleep (Lowest)	ESP Filter	-	0.022

Microbiological Examination of Fungal Spores

@ IFZA Office

Air Sample 500l @ Astragene
Sabouraud Dextrose Agar Plates

- Qualitative analysis of airborne fungal spores before and after using the Airdog X8 Air Sanitizer
- Black Mold was detected before
- Fungal Source (Air Condition) is still present, but Fungus Spores are nearly completely eliminated from Air by Airdog and will be reduced in AC and Ducts on the long term too.

Puoi leggere il documento su Springer: [Health Effects of Ultrafine Particles: A Systematic Literature Review Update of Epidemiological Evidence](#).

"Characterizing the Sources and Drivers of Air Pollution: Insights from Long-term Measurements and Advanced Data Analysis Techniques" focuses on identifying and analyzing the various sources and contributing factors to air pollution. The research involves long-term data collection and the use of advanced analytical methods to understand how different pollutants are emitted, transported, and transformed in the atmosphere. This type of study aims to provide insights that can inform policies and strategies to mitigate air pollution and protect public health. To get the exact details, you can access the study directly through the [ACS Publications website](#).

"Ultrafine particulate matter pollution and dysfunction of endoplasmic reticulum Ca^{2+} store: A pathomechanism shared with amyotrophic lateral sclerosis motor neurons?" investigates how exposure to ultrafine particulate matter (UFP) pollution might lead to dysfunction in the endoplasmic reticulum's calcium (Ca^{2+}) storage. This dysfunction is suggested to be a common mechanism that could contribute to the development of motor neuron damage seen in amyotrophic lateral sclerosis (ALS). The study explores the potential link between environmental pollution and neurodegenerative diseases through cellular pathways. For more details, you can access the study [here](#).

"Ambient Air Pollution and Lung Cancer Incidence in 17 European Cohorts: Prospective Analyses from the European Study of Cohorts for Air Pollution Effects (ESCAPE)" (Raaschou-Nielsen et al., 2013): Uno studio europeo che analizza l'incidenza del cancro ai polmoni in relazione all'esposizione a vari inquinanti atmosferici, inclusi i particolati ultrafini, indicando una forte associazione tra esposizione a PUF e aumento del rischio di cancro ai polmoni. Puoi leggere lo studio su PubMed: [Ambient Air Pollution and Lung Cancer Incidence](#).

- "Ultrafine Particles in the Workplace: A Review of Exposure, Occurrence, and Health Effects" (Schulte et al., 2012): Questa revisione si concentra sull'esposizione a particolato ultrafine nei luoghi di lavoro e sugli effetti sulla salute dei lavoratori, discutendo patologie respiratorie, cardiovascolari e neurologiche legate all'esposizione professionale a PUF. L'articolo completo è disponibile su NCBI: [Ultrafine Particles in the Workplace: A Review of Exposure, Occurrence, and Health Effects](#).

Gaining Traction, Losing Tread

[Study link](#)

This study focuses on the quantity of ultrafine particles emitted from tire wear. It discusses the implications of these emissions for air quality and public health.

- Air pollution affects every cell in the human body

[Video link](#)

This video features a pulmonologist discussing the extensive effects of air pollution on human health, emphasizing how pollutants can impact various bodily systems and contribute to numerous diseases.

- Health risks associated with ultrafine particles

[Study link](#)

This study reviews the health risks posed by ultrafine particles, focusing on their ability to penetrate deep into the lungs and enter the bloodstream, leading to respiratory and cardiovascular diseases.

- Air pollution particles in young brains linked to Alzheimer's damage

[Article link](#)

This article discusses research linking the presence of air pollution particles in young brains to damage associated with Alzheimer's disease. It highlights the potential long-term neurological effects of air pollution exposure.

- Childhood cancers rise by a third in Scotland with air pollution driving increase

[Study link](#)

This article discusses a significant increase in childhood cancer cases in Scotland, attributing this rise to air pollution. It highlights the growing concern about the impact of environmental pollutants on children's health.

Bibliografia: alcuni studi sulla pericolosità esposizione al particolato

- Characterising professional drivers' exposure to traffic-related air pollution: Evidence for reduction strategies from in-vehicle personal exposure monitoring

[Study link](#)

This study focuses on measuring and analyzing the exposure of professional drivers to traffic-related air pollution using in-vehicle personal exposure monitoring. The goal is to identify effective strategies to reduce this exposure and improve drivers' health.

- Traffic-related fine and ultrafine particle exposures of professional drivers and illness: an opportunity to better link exposure science and epidemiology to address an occupational hazard?

[Study link](#)

This study investigates the exposure of professional drivers to fine and ultrafine particles from traffic emissions and its link to various illnesses. It emphasizes the need to connect exposure science with epidemiology to address occupational health hazards more effectively.

- Occupational Vehicle-related Particulate Exposure and Inflammatory Markers in Trucking Industry Workers

[Study link](#)

This research examines the exposure of trucking industry workers to vehicle-related particulate matter and its association with inflammatory markers. It highlights the health risks faced by these workers due to prolonged exposure to particulate pollution.

- Professional drivers put at greater risk of cancer, says new research

[Study link](#)

This article summarizes research indicating that professional drivers are at a higher risk of developing cancer due to their prolonged exposure to traffic-related air pollution, particularly diesel exhaust.

Exposure to Traffic-Related Air Pollution and the Risk of Developing Cardiovascular Disease in Professional Drivers: A Systematic Review" (Mejía et al., 2011) ([BioMed Central](#)). Questo studio esamina l'associazione tra l'esposizione al particolato atmosferico e il rischio di sviluppare malattie cardiovascolari tra gli autisti professionisti. Gli autori concludono che c'è una correlazione significativa tra l'esposizione agli inquinanti del traffico e un aumento del rischio di malattie cardiovascolari.

"Respiratory Health Effects of Occupational Exposure to Diesel Exhaust in a Cohort of Truck Drivers" (Hart et al., 2013) ([BioMed Central](#)). Questo studio di coorte si concentra sugli effetti respiratori dell'esposizione ai gas di scarico dei diesel nei camionisti. I risultati indicano un aumento della prevalenza di sintomi respiratori e una diminuzione della funzione polmonare correlata all'esposizione prolungata ai gas di scarico.

"Occupational Exposure to Traffic Emissions and Lung Cancer Risk among Professional Drivers in Denmark: A Case-Control Study" (Olsson et al., 2011) ([BioMed Central](#)). Questo studio caso-controllo indaga il rischio di cancro ai polmoni tra gli autisti professionisti esposti agli inquinanti del traffico in Danimarca. I risultati mostrano un aumento del rischio di cancro ai polmoni associato all'esposizione prolungata agli inquinanti atmosferici derivanti dal traffico.

"Air Pollution and Arterial Stiffness in Truck Drivers" (Śliwczynski et al., 2020) Questo studio analizza la relazione tra l'inquinamento atmosferico e la rigidità arteriosa nei camionisti. I risultati suggeriscono che l'esposizione a lungo termine agli inquinanti atmosferici può contribuire all'aumento della rigidità arteriosa, un indicatore di rischio cardiovascolare.
